

NGUYEN HUU TRUNG

FRONTEND ENGINEER

Ho Chi Minh | huuTrung.mmt@gmail.com | 0986607599 | [LinkedIn](#)

PROFILE

Senior Frontend Engineer with 7+ years of experience building scalable and high-performance web applications using React, Next.js, TypeScript, and Vue.js. Experienced in frontend architecture, performance optimization, and delivering complex products for enterprise customers. Passionate about clean code, maintainable systems, and collaborating with cross-functional teams to create exceptional user experiences.

TECHNICAL PROFICIENCIES

Frontend:	ReactJS, Next.js, Vue.js, TypeScript, JavaScript ES6+, HTML5, CSS3, Sass/SCSS, TailwindCSS, Ant Design, Material UI
State:	Zustand, TanStack Query, Redux, RESTful API Integration
Testing:	Vitest, Jest, React Testing Library, Unit Testing, Code Review
Tool & Workflow:	Git, Jira, Figma, Agile/Scrum, CI/CD Basics, Vercel
Architecture:	SSR, SSG, ISR, Responsive Design, Performance Optimization, Reusable Components
Security:	JWT Authentication, XSS Prevention, Web Security Best Practices
Leadership:	Technical Direction, Mentoring, Cross-functional Collaboration
AI & LLM:	AI-assisted Coding, Cursor, Prompt Engineering, AI Integration

PROFESSIONAL EXPERIENCE

Front End Developer, Next Generation Platform Inc

Aug 2023 to Present

US - Remote

Worked on One Platform - a large system built with Next.js and React. It connects different marketing and planning tools using **Salesforce**, **Marketo**, and **Coupa**. I played a key role in building 3 main modules for this system:

Smart Email Builder (Oct 2025 – Present):

- Boosted creation speed by 10x:** Built a drag-and-drop UI with `@dnd-kit/sortable` that allows marketing teams (e.g., **Nutanix**) to visually assemble emails without writing HTML, scaling output from a few to **hundreds of campaigns per month**.
- Streamlined workflows:** Integrated 1-click **Marketo** sync via internal Backend APIs and dynamic placeholders to map variables directly into email templates.
- Integrated AI Generation:** Built a real-time AI chat UI connected to a Node.js MCP server, allowing users to generate and preview email templates from natural language prompts.
- Achieved 60fps rendering:** Optimized heavy UI components with `useMemo/useCallback`, `TanStack Virtual`, and render-boundary improvements.

Smart Planner (Aug 2023 – Aug 2024):

- Optimized campaign management:** Replaced manual forms with a visual system using dynamic Folders and Tables, saving significant time for enterprise clients (e.g., **Zscaler**) to organize complex hierarchies.
- Automated data syncing:** Integrated Backend APIs to bi-directionally sync thousands of campaigns, programs, and budget line items with **Salesforce** and **Marketo**.
- Ensured lag-free data tables:** Built high-performance tables for thousands of records using `Zustand`, `TanStack Query`, row/column virtualization, and infinite scroll.

Smart Calendar (Jun 2025 – Sept 2025):

- **Centralized Marketing Data:** Built a web calendar using Next.js and FullCalendar that pulls live event data from **4 platforms** (Salesforce, Marketo, Asana, Wrike) and displays them in **6 different views** (monthly, weekly, daily, list), helping marketing teams see all campaigns in one place.
- **Custom Filters & Sharing:** Implemented shareable URL-based filters with **nuqs**, allowing teammates to open pre-filtered calendar views without requiring viewer login.
- **Calendar Export & Smooth Loading:** Added one-click export to Google **Calendar**, **Outlook**, and **iCalendar**, plus batched loading with live progress feedback for large data sets.

Front End Developer, Gumi Vietnam

Feb 2018 to 2023

Ho Chi Minh City, Vietnam

Built complex web applications using Vue.js and React, including booking systems, legal collaboration platforms, AR learning websites, and HTML5 games. Led the company-wide migration to TypeScript, improved legacy frontend code quality and performance, and mentored 2 junior engineers through clean code practices and regular code reviews.

Kadogawa (Mar 2023 – May 2023):

- Built an interactive AR (Augmented Reality) learning website for children using React, Redux, and AR.js. Added smooth animations and real-time AR scanning features to keep users highly engaged.

Pharmacy (Jul 2020 – Sept 2020):

- Engineered a fast appointment booking system using Vue.js for patient check-ins.
- Integrated hardware barcode scanning to automate data entry, reducing average check-in time by **80%** and simplifying complex scheduling flows.

Lawyer (Mar 2020 – May 2020):

- Built the frontend architecture for a major Japanese legal platform using Vue.js, serving **200+ daily active users**.
- Created a real-time workspace featuring live chat via Pusher and a complex file management UI to enable seamless collaboration for large legal documents.

Math Content (Mar 2018 – Nov 2019):

- Worked directly with the **Japanese Ministry of Education** to build large-scale HTML5 games. Created smooth, interactive game elements using Canvas and CreateJS. Used Gulp to optimize heavy game assets for lag-free performance.

WordPress Developer Intern, SOLAZU JSC

Feb 2017 to May 2017

Ho Chi Minh City, Vietnam

- Built custom WordPress themes/plugins, optimized performance and mobile UX, and delivered projects on tight deadlines.

EDUCATION

University of Information Technology (UIT), Ho Chi Minh City, Vietnam

Oct 2013 to Dec 2018

Bachelor of Engineering (Computer Networks)

- Computer networks background (GPA: 7.91/10).

LANGUAGES

English: Upper Intermediate
